

Betway Nigeria Booking Code Product

Operator: Betway Nigeria | <https://www.betway.com.ng>

SCOPE Web product + Flutter view	EXPECTED DURATION 1-2 days	DELIVERY Live URL + Git history
--	--------------------------------------	---

Objective

Build and deploy a small product that works with Betway Nigeria. The solution must include a UI, backend, and a database if required, and it must be available on a public URL.

Core functionality

1. Decode / Resolve

- Allow a user to paste a Betway booking code.
- Resolve and display the slip: matches, markets, selections, and odds.

2. Encode / Create

- Take user selections and generate a new Betway booking code.

3. Convert

- Take an existing slip and produce a new Betway booking code for the same bet.

4. Verification

- Load each generated or converted code on Betway's own site and demonstrate that the resulting slip matches the expected bet.

Flutter delivery

- Implement the same slip view as a Flutter build. A rough one-screen version is sufficient.
- Deliver the Android build as an APK via Firebase App Distribution.
- Briefly explain what would change for the iOS IPA distribution path.

Engineering and documentation

- Use any development tools, AI tools, IDEs, or models you consider appropriate.
- Be prepared to explain the complete solution and architecture.
- Include Mermaid diagrams covering the solution architecture.
- Provide 100% of the source code and documentation, preferably in a Git repository.
- Include the full Git history. Commit as you work; the development process is part of the assessment, not only the final result.
- Provide a 5-minute Loom walkthrough covering your architecture and the trickiest technical decision you made.

Required deliverables

- ☐ Live public URL
- ☐ Git repository with full commit history
- ☐ Complete source code and documentation
- ☐ Mermaid architecture diagrams
- ☐ Flutter APK via Firebase App Distribution
- ☐ Short note describing the iOS IPA path
- ☐ 5-minute Loom walkthrough
- ☐ Short note explaining how the solution works

Process and timing

- Expected completion time: 1-2 days.
- Reply in the chat when you start the task.
- Reply again when the solution is ready for review.
- If you have technical questions, send them for clarification with the CTO.
